

Visualize your Portfolio on any digital display

The Rise Mobile App provides an easy to use remote control for your digital signage. Whether you have one display or dozens, you can manage all displays from one convenient mobile app. For each digital sign you can set the schedule of what you want to play and when. You can also invite your entire team to make updates and contribute images, videos, or update your portfolio holdings.

\$50 per month

At a glance you can see the performance of your portfolio. From the Rise Mobile App search and select the stocks you want to view on your table or heat map. The digital sign will provide you a colorful, visual view of all of the companies in your portfolio shown as a simple table or as a heat map.

Each display will require a Rise Media Player. The media player is designed to fit nicely behind your chosen LED TV screen and connect via HDMI to show your digital signage content from the Rise Mobile App.

Our content works with any type of screen that accepts an HDMI input for a 16:9 aspect ratio. You can supply your own displays or we are happy to provide you with a complete display solution using Philips LED screens and Peerless mounts.
